C3.895

C; Species: Xenopus laevis (African clawed frog)
C; Species: 20-U1-1990 #sequence_revision 21-Oct-1992 #text_change 21-Aug-1998
C; Accession: C34895
R; Joho, K.E.; Darby, M.K.; Crawford, E.T.; Brown, D.D.
Cell 61, 293-300, 1990
A; Title: A finger protein structurally similar to TFIIIA that binds exclusively
A; Reference number: A34895; MUID:90235278; PMID:2331751
A; Kecession: C34895
A; Status: preliminary; nucleic acid sequence not shown
A; Molecule type: mRNA
A; Residues: 1-365 < JOH>
C; Superfamily: transcription factor IIIA
C; Superfamily: transcription factor IIIA
C; Keywords: DNA binding; zinc finger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

The polypeptide is probably a DNA-binding protein probably involved in initiating transcription of the gene for ribosomal RNA 5s and maintaining the stability of transcription of other control genes and maintaining the stability of transcription of other control genes the htfIIIA polynucleotides and polypeptides are used to make therapeutic or diagnostic compositions for diseases associated with disorders of transcriptional control, particularly cancer or other inherited diseases. The htfIIIA polynucleotide can also be used to detect anomalies in gene transcription, particularly for diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim

CGCAD, by detecting the level of expression of gene(s) (GS) identified by CC DNA chip analysis as given in the specification, and comparing CC the expression level to an expression of gene(s) (GS) identified by CC Also included are modulating (M2) GA by contacting GC with an agent CC GC, where differential expression of Gs is indicative of GCA.

CC Also included are modulating (M2) GA by contacting GC with an agent CC chronic) in a tissue, an altergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC chronic) in a tissue, an altergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the Level of expression in a sample of the tissue of gene(s) from Gs, where CC the level of expression of the gene is indicative of inflammation; where CC an altergic response in a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, or an altergic response in a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, or inflammation with an agent that modulates the expression of gene(s) from Gs in the tissue. M1 is useful for screening an agent capable of modulating GA; M3 is useful for screening an agent capable of modulating GCA; M2 is useful for cresponse in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an altergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease, and affection, protozoal infection, fundal infection, protozoal infection, protozoal infection, protozoal infection, protozoal infection, protozoal infection, strail infection.

                                                                                                                                                                                                                                                                                                                                                                                                           Matches 1268;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      parasitic infection, protozoal infection, fungal infection and M5 is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and

                                                                                                                                          Internal control region of the 55 gene. The coding region (Claimed) is given in AAT14037. A fragment lacking a 5'-portion of the gene has been isolated from a human foetal brain cDNA library (OTK7-1), and the 5'-portion of the gene has been isolated by 5'-rapid amplification of cDNA ends using primers H11-R (AAT14039), H11-E (AAT14040), H11-E (AAT14040), H11-E (AAT14041) and Ap-2 (AAT14042), complementary anchor primer AAT14043. Reverse transcription using H-11R is followed by anchor primer ligation and ECR using Ap-2 and H11-E, to give a full-length cDNA, OTK7. The gene and its encoded protein may be used in diagnosis, identification or therapy of hereditary diseases such as cancer, or other diseases resulting from abnormal transcriptional control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            primer; PCR; polymerase chain reaction; foetal brain;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
      The sequence encodes human transcription factor-IIIA (hTFIIIA), a DNA binding protein with 9 zinc finger domains, which is necessary for the initiation of 5s RNA gene transcription, binding to an internal control region of the 5s gene. A fuller cDNA sequence with flanking regions is given in AAT1403B. A fragment lacking a 5'-portion of the gene has been isolated from a human foetal brain cDNA library (OTK7-1), and the 5'-portion of the gene has been isolated by 5'-rapid amplification of cDNA ends using primers H11-R (AAT14039), H11-E (AAR14040), H11-H (AAR140401) and AP-2 (AAT14039), H1-E (AAR14040), H11-H (AAR140401) and PCR using AP-2 and H11-E, to give a full-length cDNA, OTK7. The gene and its encoded brotein may be used in diagnosis, identification or therapy of hereafters, discountered from

                 The present sequence represents a fragment of a human transcription factor (designated htfIIA) gene. The polypeptide is probabaly a DNA-bhoding protein probably involved in initiating transcription of the gene for ribosomal RNA 5S and maintaining the stability of transcription of other control genes. The htfIIIA polynucleotides and polypeptides are used to make therapeutic or diagnostic compositions for diseases associated with disorders of transcriptional control, particularly cancer or other inherited diseases. The htfIIIA polynucleotide can also be used to detect anomalies in gene transcription, particularly for diagnosis of inherited disease, also for studying diseases involving hTFIIIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1140

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                 cancer associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing
                                                                                                                                                                                                                                                                                                                            Nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  망
The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABQ54313-ABQ56305), and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides, antibodies against human ovarian antiqens, and the use of ovarian antiqens polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polynucleotides encoding colon tumour proteins. The polynucleotides and encoded polypeptides are useful in pharmaceutical compositions, such as vaccines, for the diagnosis, prevention, and treatment of colon cancer. Polynucleotide sequences may be used as hybridisation probes or primers, and in the design and preparation of the primers of the diagnosis of the design and preparation of the design and the design an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             03-AUG-2000; 2000US-223283P
